**Asunto:** Agradecimientos

Apreciado Drr. Vicente González,

agradezco mucho el cordial envío de su trabajo interesante sobre las vías romanas en la Hispania septentrional. Se trata de una contribución muy importante a nuestros conocimientos sobre el sistema de comunicación y la topografía de la zona tratada. Le felicito a este trabajo.

Atentamente le saluda el suyo

Géza Alföldy

Dear Jose Luis,

Thank you very much for sending us a copy of your paper, which I look forward to reading.

I would encourage you to become a community member of the Pleiades Project (<http://pleiades.stoa.org/>) and consider sharing some of your excellent data with the wider community.

If you have questions or would like more information about Pleiades, please email me.

sincerely,

Jeffrey Becker

**To:** [awmc@unc.edu](mailto:awmc@unc.edu)  
**Subject:** New research results over Hispania roman roads

Good afternoon,

Attached to this mail, I send you a paper that I hope may be interesting for you. The paper discusses a new methodology based on GIS to locate the Roman roads, proved successfully for me in western Castile and León (Spain), and the new location proposed for several routes of Antonino Itinerary.

Excuses for my poor English, and congratulations for your very nice and interesting projects.

Kind regards.

José,

I can read ArcGIS data just fine. Please feel free to provide me with whatever data you feel comfortable with. We're currently tracing the routes in Hispania based on the Barrington Atlas and the Antonine Itinerary, and it would be interesting to compare with the results of your work.

-Elijah

Hello, Elijah;

In reference to your request, I have no problem sending you the information I requested. I would like to much that you analyze it carefully and then give me their opinion about my methodology and results. However, I'll be rather busy until November, so it take a few days in order to prepare the files with paths and location coordinates of milestones, "MANSIONES" and "MVTATIONES. Can you read without problem ArcGIS files, or work with another software?...

Kind regards

José,

**Thank you for this excellent paper**, I will look over it today. Would you be willing to share with us the route information you developed so that we can integrate it into our project? We would give your team credit, of course. I will email you with more questions after I have a chance to read your paper.

All the best,  
Elijah Meeks

**Para:** 'René'  
**Asunto:** RE: OmnesViae  
**Datos adjuntos:** 2011\_10\_10\_JLVG\_ESRI\_Conference\_2011\_ENGLISH.pdf

Good morning, René;

Attached to this mail, I send you the paper with interim results of research (in English, more than less). Yesterday I sent it to Mr. Richard Talbert and to Ancient World Mapping Center.

I hope maybe useful for all of you. Unfortunately, as you well know, the section of the Tabula Peutingeriana corresponding to Hispania is lost, so I could not use this font in my work. However, I believe that the methodology that I propose, may be applicable in other settings, if is available geographical and archeological information needed to apply it.

Later this month, we will present a paper on the topic at the 2011 ESRI European User Conference (Madrid - Spain):

<http://evento.esri.es/es/euc/agenda/ponencia/investigacion-de-la-red-viaria-romana-de-hispania-mediante-tecnologias-sig-gis-and-roman-ways-research-in-hispania/>

Congratulations for your nice and very interesting work with the OmnesViae project!

(Excuses for my poor English)

Kind regards

Asunto: OmnesViae

Hello José,

You found my e-mail address!

I am much interested in your paper.

For OmnesViae I consider to constrict myself to what is on the Tabula Peutingeriana and the Itinerarium Antonini. However, I will do a follow-up that is less restricted but am I not sure yet in what form it will be. It would be great if it would support 'user generated content' of more or less a 'wiki' model.

Regards,  
René Voorburg
